INTENSIVE SKIN RECOVERY TREATMENT  
WITH OLIGOPEPTIDES

## Properties of aloCell Gel®

**aloCell Gel®** was originally developed in 2000 by Christine M. Gimmelsberger (skintherapist) and her husband, Franz Gimmelsberger MD (specialist medical doctor) as an agent accompanying skin care following a radiation therapy. In the meantime, this patented formula with its precious ingredients has also been successfully applied to many other skin problems:

- Immediately alleviates irritations, itchiness, reddening and unpleasant tenseness of the skin.
- Restores skin elasticity, strengthens and protects skin against premature aging.
- Lessens creases and wrinkles.
- Reduces the size of the pores, keeps the moisture content of the skin intact and strengthens the tissue.
- Serves as a cell renewal agent, provides a very effective regenerative effect.
- Cell turnover is accelerated by 31 per cent.
- Serves as a protection against free radicals.
- Has a positive effect on scar tissue
- Suitable for daily intensive care of every skin type.

## With sunburns

**aloCell Gel®** stimulates cell growth – in order to counteract premature skin aging caused by solar radiation. Ultraviolet rays permeate the connective tissue, thus changing the structure of the skin and causing damage to the connective tissue. **aloCell Gel®** is immediately absorbed, permeates the skin right to the connective tissue where it starts its regenerative effect and immediately reduces irritations and reddening. Fast general improvement of the state of the skin after having been exposed to solar radiation.

## Application

The best results are achieved when you apply **aloCell Gel®** in the morning and in the evening onto the cleansed skin. Beneath the gel you may use your usual day or night skin care cream.

**With sunburns and for the accompanying care following a radiation therapy:** First the skin is cleaned with camomile or lukewarm water, then **aloCell Gel®** is applied several times a day. In this case do not use any additional scented skin cream or similar products.

**Note:** **aloCell Gel®** is not intended as a cure for skin diseases or other medical conditions, but may help correct visible problems associated with these conditions.

Dermatologist tested. For external use only.

**aloCell Gel®** does not contain parabens, fragrance, dyes or colorants.
